BANUMATH KOVINDA

Aspiring Cybersecurity Engineer| Penetration Testing Enthusiast | Cybersecurity UG

Rathnapura, Sri Lanka | banumathkovinda954@gmail.com | +94 774654865 | Github | LinkedIn | Portfolio

PROFESSIONAL PROFILE

Cybersecurity undergraduate at SLIIT with a strong foundation in network security, penetration testing, and cybersecurity operations. Experienced in working with Python, Linux, Nmap, Wireshark, and network analysis, with hands-on exposure to security-focused projects and practical labs. Interested in threat hunting, malware analysis, vulnerability assessment, and cyber threat intelligence, and motivated to develop practical security solutions while continuously expanding my technical skills.

TECHNICAL PROJECTS

OmniSight – Wazuh-Based Security Operations Centre (SOC) Lab **May 2026 – June 2026**

Wazuh, Ubuntu Server, Kali Linux, Python, Flask, Telegram API, MITRE ATT&CK

- Built a home SOC lab to monitor security events from an Ubuntu endpoint using Wazuh. Simulated SSH brute-force attempts and network scanning from Kali Linux, then connected alert data to a Python/Flask dashboard and Telegram notifications to support security event visibility.

DVWA DevSecOps Security Pipeline **August 2026 -September 2026**

Docker, Docker Compose, GitHub Actions, Semgrep, Gitleaks, Trivy

- Worked on container configuration and security automation for a deliberately vulnerable web application lab. Contributed Docker topology and health checks, secrets-management practices, container scanning with Trivy, and CI/CD security checks to identify issues during builds.

CyberBank: Operation BlackVault – CTF Platform **September 2026 - present**

Docker, Linux, Web Security, Digital Forensics, Steganography

- Worked with a fictional banking-themed Capture The Flag environment covering OSINT, steganography, web security, cryptography, digital forensics, and Linux/system security.
- Practised evidence-based investigation in a controlled lab, including file analysis and identifying embedded data in a challenge asset.

TECHNICAL SKILLS

Cybersecurity- SOC fundamentals, security monitoring, vulnerability assessment, OWASP Top 10, threat modelling
Security tools - Wazuh, Nmap, Kali Linux, Wireshark, OWASP (include only if confident using it)
Networking - TCP/IP,DNS,HTTP, PortC Service Enumeration
Programming & scripting - Python, Bash (basic), SQL, HTML/CSS/JavaScript (adjust to your actual level)
Platforms & tools - Linux, Ubuntu Server, Git, GitHub, Flask, VirtualBox

CERTIFICATIONS & LEARNING

- Fortinet NSE 2 / Certified in Cybersecurity
- Coursera – Cyber Security: DevSecOps (Macquarie University)
- CISCO-Network Basics
- TryHackMe – OWASP Top 10 learning module

EDUCATION

BSc (Hons) in Information Technology – Cyber Security Specialization **July 2024 - Present**
Sri Lanka Institute of Information Technology (SLIIT) | Undergraduate
Relevant focus: Network Security, Secure Software Development, Penetration Testing, DevSecOps, and Security Operations.

Engineering Technology **2021-2023**
R/Kuruwita national collage
